

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 7, line 9 of the PCT publication with the following replacement paragraph:

The protrusion may be made of the same material as the protective layer 20. If the protrusion is made of different material to the protective layer 20, it is possible to form a coating layer made of glass, ceramic or polymer resin on the surface of the protective layer 20 and the protrusion(s) 30, 31, 32 or 60 in order to prevent deterioration of adhesive force due to the use of different materials in advance. See, e.g., FIG. 9A, coating layer 35.
